

Scan (SCAPPEKPCAP) Gel Knee Pads

The Scan Gel Knee Pads provide protection to your knees when working in a kneeling position. Typical applications include kneeling on uneven surfaces, laminate flooring, roofing work, concrete screening, laying patios and general gardening work. These gel knee pads feature air injected technology and a comfortable gel foam padding that supports the knee, a stabiliser cap provides a comfortable and sturdy supported kneeling position. Adjustable neoprene straps and hook loop fastening system, allow them to be easily attached over work trousers. The soft internal padding is breathable for all-day comfort. The durable gel pads combined with the waterproof fabric make these knee pads ideal for a variety of working conditions. 3-ply construction provides protection, comfort and stability. The pad caps are anti-slip, non-marking and anti-scratch, and provide mechanical protection with penetration resistance up to 100N and are suitable for work on most surfaces. Conforms to EN 14404 standard.
